## 3rd Annual Precision Mental Health and Wellness Symposium

October 24, 2023

*Precision Psychiatry, Personalized Neuroscience &  
the Future of Mental Health Treatment*

The Stanford Center for Precision Mental Health and Wellness and Stanford's Major Laboratories and Clinical Translational Neuroscience Incubator presented the 3rd Annual Precision Mental Health & Wellness Symposium on Tuesday, October 24.

We had over 180 attendees and a widely attended Happy Hour Poster Session with over 25 poster presentations. The symposium explored a precision approach to psychiatry in which neuroscience insights about the human brain are translated into real world clinical care enabling clinicians to help improve the quality of individual lives.

Topics addressed fell under three strategic themes of research: Translational and Novel Therapeutics, Novel Approaches to Stratified/Precision Mental Health, and Precision Mental Health & Clinical Translational Neuroscience.

We would like to personally thank our expert speakers, poster presenters, attendees and affiliates for joining us for a day of lively discussions and captivating advancements in precision mental health research. The success of this event would not have been possible without the participation, engagement, thoughtful questions and inspiring conversations of all those who joined.

Attendees heard how mental health is being reconceptualized as brain health, leveraging novel insights from neuroscience. Learning about new approaches to understanding individual experiences of disorders such as depression by understanding the brain, how we are starting to personalize treatments and exciting new directions in rapid acting therapeutics.

These new discoveries provide hope for the future of mental health treatment.

# RECORDINGS

## OPENING PLENARY

Helen Mayberg, M.D.

Professor, Neurology,  
Neurosurgery, Psychiatry  
*Mount Sinai, Icahn School of Medicine*

'The Evolution of Imaging Biomarkers  
to Guide Major Depression Treatment'

[WATCH NOW](#)

## DEANS' REMARKS

Lloyd Minor, M.D.

Dean, School of Medicine  
*Stanford University*

Remarks

[WATCH NOW](#)

## KEYNOTE

Carolyn Rodriguez, M.D., Ph.D.

Professor, Psychiatry &  
Behavioral Sciences  
*Stanford University*

'Future of Translational Therapeutics  
Novel Mechanisms'

[WATCH NOW](#)

## RISING STAR

Xue Zhang, Ph.D.

Postdoctoral Scholar, Psychiatry &  
Behavioral Sciences  
*Stanford University*

'Personalized Imaging with Novel  
Therapeutics'

[WATCH NOW](#)

## RISING STAR

Leonardo Tozzi, M.D., Ph.D.

Director of Computational  
Neuroscience & Neuroimaging Program  
*Stanford PMHW*

'Personalized Brain Circuit Scores  
Linking Biotypes, Symptoms, Behavior  
and Treatment Outcomes'

# RESEARCH NEWS

## Stanford Medicine study reveals why we value things more when they cost us more

*It may not be smart, but we value something more if we've put a lot of sweat into it. Neuroscientists may have figured out the biochemical basis of why.*

By Bruce Goldman, senior science writer in the Stanford Medicine Office of Communications

Highlighting the findings in a recent publication, 'Striatal dopamine integrates cost, benefit, and motivation,' the Stanford article describes the connection between what economists call "sunk costs" and its affects on our behavior in ways that can be irrational.

"We make fallacious decisions based on what we've invested in something, even if the probability of actually gaining an objective advantage from it is zero," said assistant professor of psychiatry and behavioral science Neir Eshel, MD, PhD. "And it's not just us. This has been shown in animals across the animal kingdom."

A few years ago, Eshel, his then-postdoctoral adviser Rob Malenka, MD, PhD, the Nancy Friend Pritzker Professor in Psychiatry and Behavioral Sciences, and some Stanford Medicine colleagues began conducting experiments to learn more about wanting versus liking and what, if any, role dopamine secretion in the brain plays in each of these states.

To learn more about the possible neural mechanism for the longstanding psychological observation that we value rewards more if we worked harder for them, click the link [here](#).

## Novel Screening Tool and Recovery Program May Help Reduce Mental Health Problems After Trauma

*Two new studies address an American College of Surgeons guideline for trauma centers to screen and address mental health.*

By Dan Hamilton and Sheila Lai

### Key Takeaways:

- A new mental health screening tool accurately predicts mental health outcomes for hospitalized trauma patients.
- To be sustainable, mental health screening and recovery programs should be tailored to each trauma center, with the engagement of all stakeholders, a related study finds.
- Studies shed light on the need for trauma centers to provide injured patients with mental health resources, such as online education, support, and referrals to mental healthcare providers when needed.

A novel screening tool helps to identify hospitalized trauma patients at high risk for later mental health problems, and an emotional recovery program for trauma patients is feasible, according to two studies published in the *Journal of the American College of Surgeons (JACS)*.

At least one in five Americans hospitalized after traumatic injury develops posttraumatic stress disorder (PTSD), depression, and/or other psychiatric disorders. However, most U.S. trauma centers report not routinely screening trauma patients for mental health problems, a 2022 survey found. Last year, the American College of Surgeons Committee on Trauma began requiring ACS-verified trauma centers to routinely screen trauma patients for mental health risks and to refer affected patients to mental healthcare practitioners.

"Early responses to trauma do not accurately predict who will develop mental health problems," said Eve Carlson, PhD, a clinical psychologist researcher with the National Center for PTSD and lead author of a study published in *JACS* that described the development and initial performance of a novel mental health risk screen for hospitalized patients.

# The Academy of Consultation-Liaison Psychiatry Announces Three of the Top Awards for 2023

## Dr. Gen Shinozaki receives the Wayne Katon Research Award

Gen Shinozaki, MD, FACLP, Associate Professor of Psychiatry and Behavioral Sciences, Stanford University School of Medicine, is the recipient of the Academy of Consultation-Liaison Psychiatry (ACLP) Wayne Katon Research Award. Dr. Shinozaki was selected by the Academy's Research and Evidence-Based Practice Committee. He was presented with his award by Chris Celano, MD, FACLP (pictured right).

In addition to the award, Dr. Shinozaki gave his award plenary lecture at the ACLP Annual Meeting in Austin, Texas last month (pictured below). The talk was widely attended, reaching record-breaking attendance with over 1,400 in the audience. Shinozaki shared his work on EEG detection of delirium and epigenetic investigations. He acknowledged the contributions of his mentees in addition to thanking his mentors that have helped guide him through his research career.

Dr. Shinozaki expressed his excitement and drive to continue his research endeavors, helping patients with delirium. Click below to learn more.
